Science, Wisdom, and the Future

Humanity's Quest for a Flourishing Earth

\$19.95 Hard Cover

\$14.95 Soft Cover

Forty-one authors including Michael Dowd, Riane Eisler, Duane Elgin, Peter Hess, Barbara Marx Hubbard, David Loye, Ron Nasher, and Bob Willard—scientists, philosophers, poets, economists, educators, activists, artists, and business people consider vital questions about the human species and its relationship to the Earth and all other life. In their deliberations they provide a broad vista of the human and planetary conditions and illuminate how we can draw on both science and wisdom to create a sustainable future on a flourishing Earth. Several important themes emerge from these pages:

- Our impact on the living systems and resources of our planet
- Our interconnectedness with everything
- The importance of community, relationships, and wisdom
- The urgent need to address our daunting reality and our future
- Our scientific cosmology's capacity to inform and guide us

Edited by

Cheryl Genet, Jack Palmer, Linda Gibler, Linda Palmer, Russell Genet, & Vera Wallen

Foreword by

Nancy Abrams and Joel Primack

A 438 page book containing 38 chapters.
